

GOVERNMENT TECHNOLOGY CONSULTING

Technology Essentials LLC

OUR VISION

To be the technology partner public agencies rely on to adopt AI responsibly, secure their applications, and modernize software, delivered by senior engineers with full transparency.

25+

Years of engineering leadership

3

Core practice areas, one delivery team

NIST

RMF & SSDF aligned delivery

Prime

or teaming subcontractor

CORE COMPETENCIES

Artificial Intelligence & Data

- ✓ AI readiness & use-case triage
- ✓ RAG assistants on agency data
- ✓ Model evaluation & bias testing
- ✓ MLOps & NIST AI RMF governance

Cybersecurity & AppSec

- ✓ SAST, DAST & secure code review
- ✓ Pen testing: web, API, cloud
- ✓ SBOM & software composition analysis
- ✓ RMF / FedRAMP ATO support

Software Engineering

- ✓ Legacy modernization & migration
- ✓ Cloud-native on FedRAMP platforms
- ✓ APIs, CI/CD & infrastructure as code
- ✓ Section 508 & independent V&V

DIFFERENTIATORS

Assessment Before Implementation

Every engagement opens with a written baseline of your architecture, security risks, and data readiness, so your contracting officer has a defined scope before any build work is billed.

Security Built Into Every Release

SAST, DAST, dependency, and infrastructure-as-code scans run inside the CI/CD pipeline and block releases that fail. Findings map to NIST SP 800-53 controls to support your ATO package.

Government-Owned Deliverables

The agency owns all source code, documentation, and pipelines. We build on open standards and hand over everything your team needs to operate and extend the system without us.

Senior Engineers on Every Task

The engineer who scopes your requirement is the one who does the work. Your program office deals directly with the people building the system, with weekly status reports and an open backlog.
